

EXTRACT

BEHAVIOR IN SUSPICIOUS EVENTS

In the event that a guest present in the structure presents fever and symptoms of respiratory infection (dry cough, fever, sore throat, breathing difficulties) he must promptly notify the company management.

The communication must be made by telephone.

The company management promptly informs the competent health authority (by contacting the emergency numbers for Covid-19 indicated by the Region) and the competent doctor.

In order to minimize the risk of contagion, while waiting for the arrival of the doctors, the guest must take the following measures:

- wear a surgical mask;
- minimize contact with other people;
- stay in your apartment and in particular in one of the 2 bedrooms, isolated with the door closed, ensuring adequate natural ventilation;

Management must:

- carry out any forms of assistance, connected to urgent needs, only by a person in good health, using the appropriate personal protective equipment (face protection, clothes covers and FFP2 mask);
- wash your hands thoroughly with a hydroalcoholic solution before and after contact with the person or with the living environment; pay particular attention to the body surfaces that may have come into contact with the fluids (respiratory secretions, urine, faeces) of the patient;
- have any used paper handkerchiefs removed in a waterproof bag directly by the guest; the infected materials produced will be disposed of by the rescue personnel.

The Company Management has a Kit available to use for those who have symptoms of Covid-19 or for those who take care of an affected person, which includes the following elements:

- FFP2 type masks;
- face protection;
- gloves (disposable);
- protective apron (disposable);
- full-length long-sleeved jumpsuit;
- shoe covers (disposable)
- disinfectant / germicidal wipes for cleaning surfaces and fabrics;
- disposable bag for biohazardous waste;

Appropriate cleaning measures will be applied in rooms and other areas of the accommodation in which confirmed cases of Covid-19 have stayed before being hospitalized, with the intervention of a specialized company.

Healthcare personnel may request information about the close contacts that the infected person has had within the facility.

The company may ask any close contacts to leave the business as a precaution, according to the indications of the Health Authority.

The company management, in agreement with the health authority, will evaluate the modalities of any information of the people not involved.
